XV.—METEOROLOGICAL STATISTICS.

No. 42.—Notes on the Rainfall of Western Australia during the months of January, February, and March, 1929.

January.—The only rainfall productive of substantial registrations during the month occurred during the opening days of the month, and affected mainly the East Gascoyne and Goldfields and South Coast areas, where a number of localities showed excesses above the normal for January.

To a lesser extent the metropolitan areas and the agricultural districts participated but only in isolated instances was the monthly average exceeded. In general, the month showed a pronounced shortage of rain, only one division, the Eucla (extreme South-East) indicating a slight excess.

Despite the excesses in parts of the South Eastern and East Gascoyne (goldfields) divisions, those regions as a whole, together with the remainder of the State recorded rainfall from 20 per cent. below normal to nil. In the Kimberleys this defect was most serious, and although excesses, due to a single rainstorm, were the rule in December, the season's fall has been, to date, amongst the weakest on record. The almost rainless month in the De Grey division was of less consequence, in view of the excellent downpour of late December, but in the Fortescue, West Gascoyne, and parts of the East Gascoyne, the lack of rain was a serious matter, while in the agricultural districts relief from the regular summer drain on water supplies would be welcomed.

February.—The rainfall for the month was due to three main disturbances—1. A southern "Low" on the 7th, confined in its effects to districts near the South-West Coast; 2. A "Willy Willy" storm, which first appeared off the North Kimberley Coast on the 8th, gradually worked southward and eventually passed inland North of Geraldton on the 14th; 3. A monsoonal system operating from the 21st to 23rd. A fourth system of monsoonal origin at the close of the month brought only light rains.

In the tropics the totals at inland and coastal localities offered pronounced contrasts. The inland Kimberley districts fared somewhat better than in January, but nevertheless, showed heavy deficiencies, while the inland North-West stations averaged about normal, but with considerable local variation.

On the Coast the position was reversed. Broome and La Grange fell slightly short of the average, but at other stations excesses were noted, amounting to as much as 6.24 inches at Wyndham, and 5.53 inches at Roebourne, 5.26 inches at Whim Creek, and four inches at Port Hedland. The "Willy Willy" rains of the 12th and 13th were mainly responsible, but at Onslow the chief fall was 264 points on the 21st.

Gascoyne results were also variable. The coast and the Central Murchison Goldfields fared rather poorly, while the inland parts of the West Gascoyne, the North Murchison, and the Lower Murchison generally exceeded the average, either as a result of the extension of the mid-month "Willy Willy" rains, from those of the 21st, or both combined. Yalgoo showed a four inch fall from the former influence, an excess of three inches above normal.

The same patchy character marked the agricultural and South-West Coastal rainfall. Variations from slightly below to heavily above the average were noted on the coast, while in the wheat areas the central parts of the Great Southern country, and the Northern Midlands, in general, showed defects, other cultivated areas, including the Yilgarn, receiving excellent falls on the 14th and 15th, with some supplementary showers on the 23rd. The water supply difficulty was thus overcome in most of the localities where it had previously been acute.

The Eastern Goldfields and South-East Coast were affected only by the fringes of the various storms, and the falls were not worthy of comment.

March.—Following on the tropical rains in February, splendid falls occurred in the Kimberley and North West, during March. These extended through the East Gascoyne and Murchison country.

Unfortunately, however, beyond some heavy isolated thunderstorms the Eastern and Goldfields pastoral districts did not benefit to any extent. In the agricultural districts the only really general rain occurred on the 17th, heavy gaugings being reported from the Eastern and North-Eastern portion of the Wheat Belt. On this occasion the northern section only received light falls, but on the 23rd, some heavier registrations were reported at several stations, while on the same date, further south in the Central division a destructive storm caused extensive damage at several isolated places.

Outstanding daily falls were 377 points at Roebourne on the 22nd, 376 at Meekatharra on the 25th, 344 at Onslow on the 23rd, 303 at Turkey Creek on the 26th, and 367 points at Three Rivers on the 23rd and 24th. The highest monthly registration was shown at Derby with 906 points, 485 points above the average. This was followed by Onslow with 848 points, 725 points above, and Wyndham with 811 points, 341 points in excess of the average.

As before noted, weaknesses were shown over the Eastern pastoral country and also on the Coolgardie Goldfields, while very light rains were noted throughout the Southern agricultural areas, and dry conditions were reported in the Shark Bay district.
